TECHNICAL SKILLS

Languages C#, C++, TypeScript, JavaScript, Python

Backend ASP.NET Core, .NET, EF Core, Dapper, Node.js, Express.js, SignalR, REST APIs, JWT

Data PostgreSQL, MySQL, Redis, SQL

Frontend React, Next.js, TypeScript, TailwindCSS, Vite

Architecture & Tools Clean Architecture, SOLID, DDD, System Design, Docker, Git, GitHub

EDUCATION

BSc Software Engineering

NTU Ukraine — Igor Sikorsky KPI

2025 – Present

BTEC Level 3, Computer Science

JCB Academy, UK

2023 – 2025

LANGUAGES

English — B2

Ukrainian — Native

Russian — Fluent

SUMMARY

Junior .NET / Full-Stack Software Engineer (C#, ASP.NET Core, React, TypeScript, PostgreSQL, Docker) with freelance commercial experience and a strong independent project portfolio. Delivered a Redis-backed log observability platform with real-time dashboards, a video streaming backend using HTTP range requests, and a Docker Compose visual editor deployed at docker-viz.netlify.app.

PROJECTS

AI-Assisted Log Observability Platform *Apr – Jun 2026*

github.com/ezpectus/AI-Log-Observability-MVP — .NET 10, ASP.NET Core, PostgreSQL, Redis, Dapper, EF Core, React, TypeScript, Python

- Built a real-time log ingestion pipeline using thread-safe concurrent collections so metrics aggregation stays lock-free under concurrent write load.
- Reduced duplicate error noise by hashing incoming exceptions (SHA256) before persistence, cutting redundant writes for repeated stack traces.
- Built a Redis-backed processing queue with a dedicated worker service; split PostgreSQL access between EF Core and Dapper depending on query complexity.
- Delivered SignalR-powered live dashboards for real-time error visibility, plus an AI-assisted analysis flow that proposes C# patches for recurring exception patterns.

VideoHub Platform — Technical Lead, 6-person team *Mar – May 2026*

github.com/ezpectus/VideoHub — Node.js, Express.js, TypeScript, PostgreSQL, Prisma ORM, Next.js, React

- Led technical implementation across a 6-person team, setting architecture direction and development standards from scratch.
- Designed the PostgreSQL schema and application architecture to support video upload, streaming, and social features.
- Implemented HTTP 206 partial-content streaming with range-request handling, plus in-memory view-count batching to cut write contention on popular videos.

Task Manager Platform *Jul 2025 – Jun 2026*

github.com/ezpectus/TaskManager_App — ASP.NET Core, .NET, PostgreSQL, EF Core, React, TypeScript

- Designed a full-stack task management platform using Clean Architecture and Domain-Driven Design, keeping business logic independent of infrastructure.
- Implemented JWT authentication, role-based authorization, validation, structured logging, caching, and rate limiting.
- Covered core logic with 75+ unit tests (xUnit, Moq); built a React Kanban dashboard with analytics views.

Docker Compose Visualizer *Jun 2026*

github.com/ezpectus/docker-compose-visualizer — Live demo: docker-viz.netlify.app — React, TypeScript, React Flow

- Built and deployed a bidirectional YAML-to-graph editor with AST-preserving edits, supporting multi-file Compose projects.

EXPERIENCE

Freelance Software Engineer — Upwork *Jun 2026 – Present*

- Delivered bug fixes and code refactoring for a client-facing calculator tool, improving code structure and reliability.
- Built a business website for Hestia, a company-facing site showcasing services to prospective clients, including refactoring and restructuring the existing codebase for maintainability.
- Completed freelance engagements for 3 clients to date, working directly with non-technical stakeholders to scope and deliver requirements.

Information Security Intern — JCB *Jul & Sep 2024*

- Completed a two-part cybersecurity internship covering threat modeling and secure software development practices under supervision.

OPEN SOURCE

- Publish reusable Clean Architecture and lock-free data-structure templates in C# and C++ for backend and systems projects.
- Solved 3,200+ algorithmic challenges across LeetCode & HackerRank, demonstrating strong data structures and algorithms fundamentals.
